

Christmas Tree

Science Experiment

Method

1. To start with, pour baking soda onto the tray/sheet and shape it like a Christmas tree, using your hands and a spatula.
2. In one bowl, mix the red food colouring with some vinegar. In the other bowl, mix some vinegar with the green food colouring.
3. Using the pipettes, drip the vinegar mixture onto the baking soda tree and watch as the baking soda 'ornaments' fizz and bubble away.
4. Talk about the reaction the vinegar makes when it hits the baking soda.
5. Watch as the 2 colours mix together.

You will need:

Baking Soda

White vinegar

Red food colouring

Green food colouring

Pipettes

A baking tray or sheet

Spatula

Two small bowls
